

Ed Buckner

3-22-23

Mr. Buckner-

We have revised the sampling plan to include an additional table per your 3-21-23 request. The list of agricultural fields segregated by Group for all agricultural fields where conditioned mash was applied to the agricultural fields for its agronomic value. The WDG, lagoon sludge, bio-solids mash, etc. are names for the materials in a raw state that once processed are conditioned mash which is the only solid material applied to agricultural fields.

The data for the Item 2 is included in the tables for Item 1. Please see the map indicating each Group. Each Group map indicates the areas of application in 2020 and 2021 such that the application rates are in the Group table. The area map indicating all fields is included in the revised plan.

Item 3 the application rates and acres applied have changed slightly due to slight variances in field acres and acres applied; for example Tract 17 NE/4 36-16-38 has 122 acres, only 92 acres were applied due to coverage area of circle pivot. Each of the variances are indicated in the table for Item 1.

Please find included in the revised Sample Plan, the sample handling procedure for PAL, Matrix.

Sincerely,

Terry D. Bobo, PCHMM, REM, CRM/EPA
President

for an environment we can all live with today & tomorrow
